2006 Honda Odyssey Seatbelt Project

Job ID: 2006 Honda Odyssey SeatBelt Project 0612-001

Date: 15 June 2012

Background:

We are looking to find a solution to install a middle seat in the 2nd row of a 2006 Honda Odyssey with Navigation option. This is also known as a “magic seat”, “jump seat” or “8th seat”, and will be referred to as the “8th seat” in this document.

The problem: 2006 Honda Odyssey vehicles with Navigation (also known as Touring Model) do not have a mounting point to install a seatbelt for the 8th seat due to the fact that this did not come as an option. For other 2006 Honda Odyssey models (EX, LX, EX-L) there was an option for an 8th seat, and as a result, a place to hook up the seatbelt.

We have purchased an 8th seat, but there is currently no place to install a seatbelt. We need a mounting point welded into the frame of the vehicle, and a seatbelt which will connect as a lapbelt.

Solution: I have read that a solution can be found by installing a mounting point on the floorboard of the 2006 Odyssey and that this solution is listed online. Also we need to purchase the correct OEM seatbelt. I need to locate the instructions for the install online, and also the model and cost for the seatbelt.
Assignment:

1) Determine instructions online that show where to mount a floor based seatbelt for the 8th seat.
   a) Please note: some have looked into mounting the seatbelt from the ceiling like the other seatbelts in the vehicle. This is not the solution I am looking for. Rather, I am looking for the solution where a lapbelt is used, and as a result, the seatbelt would go from the 8th seat into a mounting point onto the floorboard.

2) Find the part number and cost for purchasing a seatbelt which would accommodate the Honda Odyssey

Resources:

1) Use this link as a starting point:

   Important: This job must be completed in the next 48 hours!
